METALSISTEM OBTAINS THE ISO9001:2015 CERTIFICATION!

A new edition of the ISO9001 quality management system certification was published on the 15th of September 2015. Due to the extensive revision made to this standard, a period of three years was given for ISO9001 certified companies to align their systems to the updated standard.

This heavily revised standard revolutionises the approach to quality assurance in key areas, broadening its scope to emphasise awareness rather than form; placing its attention on processes, product, environment, safety, social responsibility and energy resource management.

The new ISO9001:15 edition presented a context within which METALSISTEM could mould many of the elements that formed part of the deep organisational restructure that were undertaken over recent years such as METALSISTEM's modernisation and integration of systems and processes as well as its adoption of new management tools.

As a direct result of this work, METALSISTEM can now announce that it has become one of the first companies to obtain this new certification some years in advance from its mandatory implementation.

The new standard has been implemented in the Rovereto, Gussago and Gambara plants.

The new ISO9001:15 certification is the basis upon which many other certifications are established, including:

- EN1090-1 - CE Marking;
 - EN15512 - Steel Storage Systems Standards;
 - ISO14001:2004 - Environmental Management System;
 - AEO "Full" - Authorised Economic Operator Certification;
 - OHSAS18001:2007 - Occupational Health and Safety Certification;
 - EN3834-2 - Fusion Welding Certification;
 - TÜV Marking;
 - CISI Membership;
- and others.
